

HOW TO MAKE A CAGED BIRD THAUMATROPE

MATERIALS NEEDED

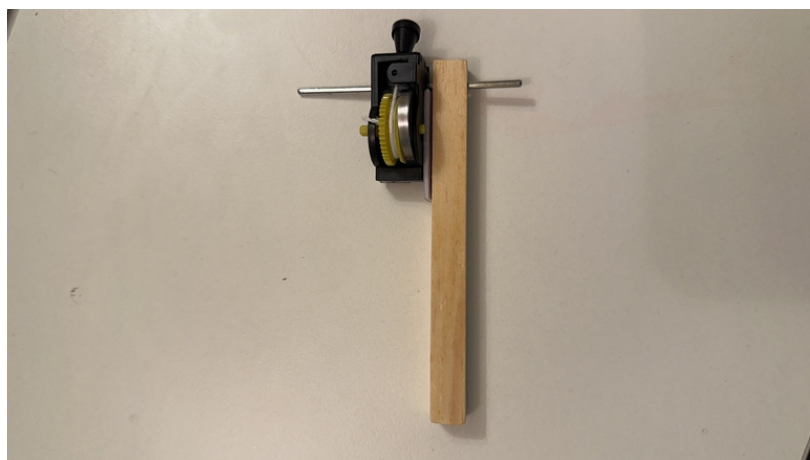

Bird and Cage cardboard
Double-sided tape
Wooden bar
Pull String Winder

HOW TO MAKE A CAGED BIRD THAUMATROPE

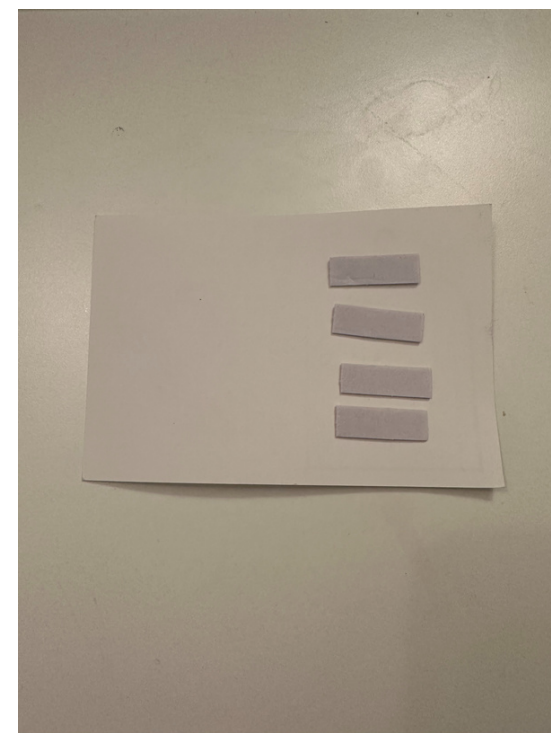

INSTRUCTIONS

1

Insert the metal stick through the wooden bar and fix the two items with double sided tape

2

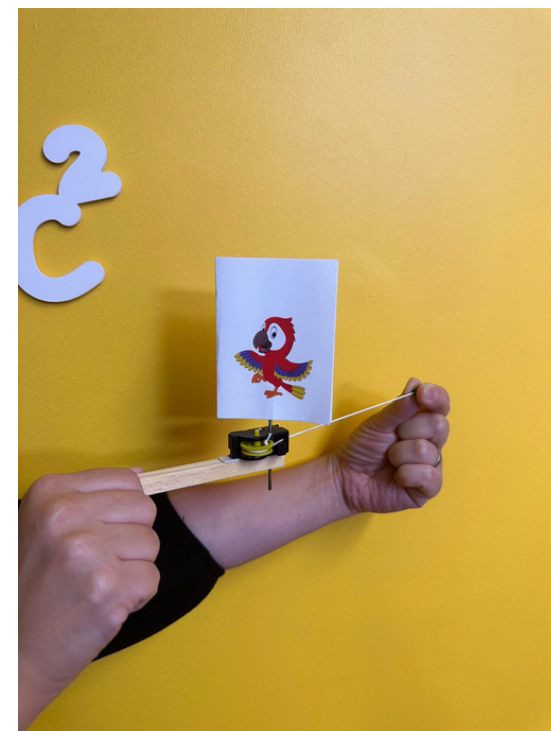

Stick double sided tape at the back of the cardboard

3

Fold the cardboard in half and stick the other end of the metal stick in between the folded cardboard.

4

Now you can pull the string and see what happens with the bird.

What is the purpose of Thaumatrope?

Thaumatrope uses the same illusion to join two separate images into one image. Even after the object is removed, the impression of an object seen by the eye remains. If we see another object before this time, the impressions of the two merge to give us a sense of continuity.
